DETAILED ACTION

Claim Objections

Claim 1 is objected to because of the following informalities: In line 12 the duplicate "having" should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 13 recites the limitation "said plurality of colors" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-9 and 11-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Currie (USPN 5,178,537) in view of Ferranti (US 2001/0031443). Currie discloses a dental instrument 10 comprising a generally cylindrical handle 12 connected to a first metal tool tip 14. Ferranti teaches a nonmetal cover 10 as shown in Fig. 2. This also reads on Claim 15. The cover 10 having a central region near probe tip 14 and a first and second enlarged region on opposite

Application/Control Number: 10/632,263 Page 3

Art Unit: 3732

sides of the central region which are integrally connected to the central region. Also the central region has a central wall having a smallest outer diameter at point of least wall thickness and the first and second enlarged regions having a largest outer diameter at the greatest wall thickness at a thickest point on the outer surface of the cover 10. As to Claim 6, Currie teaches several "probe tips 14" (col.4, line 32). To Claim 7, Ferranti teaches raised portions 17,18 on cover 10. Further to Claims 8 and 9, Ferranti teaches a cover 10 formed of "elastomeric material [0012]. With regards to Claims 17 and 18, Currie teaches a first connector 30 being connected to the handle 12 and tip 14 and a plurality of connectors and tips 14.

Further regarding Claims 1-5,11, and 16, Currie and Ferranti disclose the claimed invention except for the ranges as stated in these claims however, it would have been obvious to one having ordinary skill in the art at the time the invention as made to incorporate the ranges as stated in the claims, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

As to Claims 12 and 13, Currie and Ferranti disclose the claimed invention except for the cover comprising a plurality of colors. It would have been an obvious matter of design choice to change the color or use any color, since such a modification would have involved a mere change in the color of a component. A change in color is generally recognized as being within the level of ordinary skill in the art.

Allowable Subject Matter

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Candice C. Stokes whose telephone number is (571) 272-4714.

The examiner can normally be reached on 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Shaver can be reached on (571) 272-4720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
